

Feedback from experience in developing digital agriculture in Africa by Agricultural Service Provider Companies

Pauline Chivenge and Hakim Boulal

Spatial variability in smallholder farming systems

Site Specific Nutrient Management – Historical perspective

Nutrient Expert® for Wheat - Recommendation Sheet

Name and/or Location Site 1; Fès-Meknès; Fes; Morocco

Field size 1 ha Wheat crop bread wheat

Current yield 4 ton (13.5% MC) 4 t/ha (13.5% MC)

Growing environment Favorable rainfed

Recommended alternative practice for wheat

Yield goal 5 ton (13.5% MC) 5 t/ha (13.5% MC)

Seed rate 150-200

Growth stage	DAS	Fertilizer sources	Amount (kg/ha)	N	P ₂ O ₅ (kg/ha)	K ₂ O
Basal	0	Diammonium hydrogen phosphate (DAP)	97	17.46	44.62	0
		Ammonium sulfate (SA)	98	20.58	0	0
		Potassium chloride	90	0	0	54
Tillering	70-80	Ammonium nitrate	170	56.95	0	0

Recommendation for fertilizer placement:

1st application

If combined seed and fertilizer drill is available, apply granular fertilizer in band. Else, broadcast and incorporate. For powder fertilizer, broadcast and incorporate.

2nd/3rd application

Broadcast fertilizer manually or by using a fertilizer spreader.

Other sources of nutrients

Crop residue (Beans): low

Validation on-farm trials for NE of wheat in Morocco

Region	Province	(n)*	Yield (t/ha)			Gross Profit (USD/ha)		
			FFP	NE	NE-FFP	FFP	NE	NE -FFP
Abda	Safi	10	4.54	5.28	+0.74	9343	10305	+96
Chaouia	Settat	5	2.45	3.75	+1.31	4278	6839	+256
	Berrechid	5	2.86	3.75	+0.88	5431	6825	+139
Fez	Sefrou	10	4.20	5.36	+1.16	8261	10230	+196
Tadla	Fquih bensaleh	10	6.86	7.89	+1.43	13468	15145	+167

Source: Boulal et al. (unpublished data)

*FFP data (from one cropping season) = 5-10 farmers per province

Triple-Wins with SSNM (NE) recommendations in Nigeria

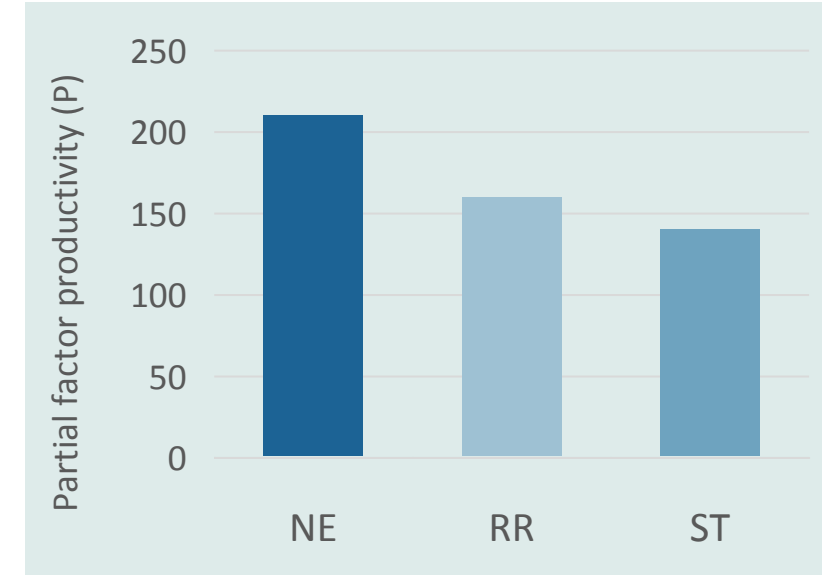

Double yields over farmer practice

Small yield penalty compared with RR and ST

Reduced cost of fertilizer by >50%

Increased fertilizer use efficiency by >30%

Dissemination – Rice Crop Manager

AEW, agriculture technician:

- Downloads small app from internet,
- Interviews farmer,
- Submits information by internet to RCM on cloud-based server

Personal computer

Smartphone

RCM automatically:

- Generates recommendation printed by AEW and given to farmer
- Sends text messages to farmers

Printout before crop establishment

Text message reminders during the season

Each farmer's field gets a unique recommendation on nutrient and crop management

RCM Across Geographies

Co-benefits of SSNM: Meta analysis, 61 papers

Regional Responses

Maize

data points

data points

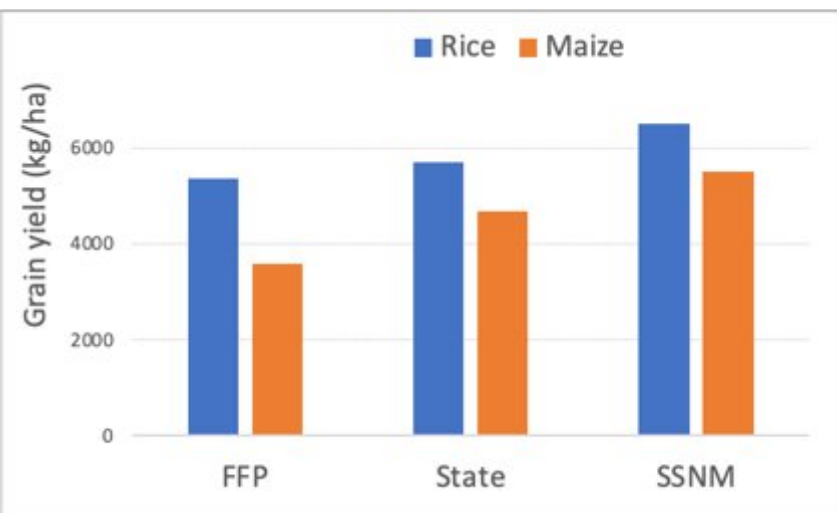

Rice

Wheat

SSNM performance across 9 studies in SSA

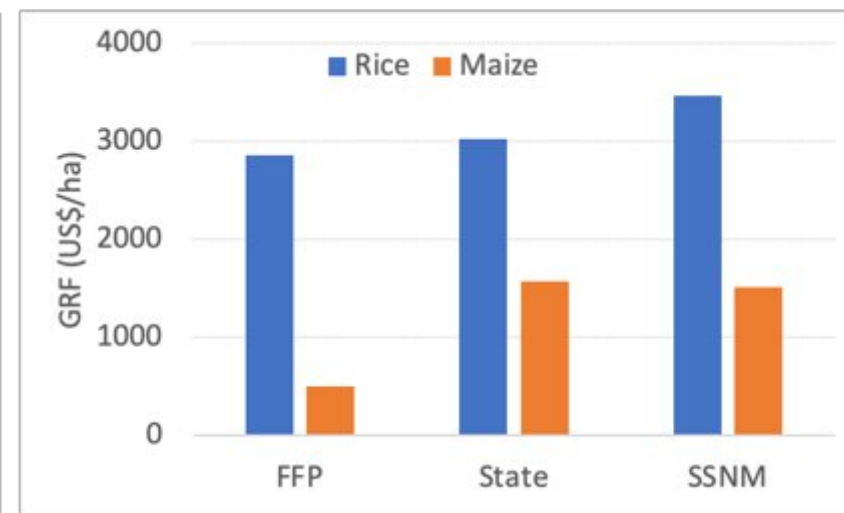

21%, 50% greater than FFP in rice, maize

14%, 17% greater than state rec in rice, maize

9%, 54% greater than FFP in rice, maize

3%, 21% greater than state rec in rice, maize

21%, 300% greater than FFP in rice, maize

15% greater than state rec in rice, 4% lower than state in maize

Future Direction and Highlights

**Link with geospatial tools
for scaling**

**Develop and calibrate
proxies to estimate INS**

Link with service providers

**Access to reliable & timely
weather forecasts**

**Intentionally include
micronutrients to improve
human nutrition**

Need public-private partnerships
to create dissemination channels

Develop sustainable business
models

Investment and policies to
create an enabling environment
to support adoption

Thank You
